

## D2C ENTREPRENEUR CHALLENGE

### THE CHALLENGE

---

Build a **D2C functional snack or energy product** for Indian students.

Students are constantly running between classes, assignments, internships, exams, content creation, side hustles, gaming, travel, and social plans. Most of them depend on chai, coffee, chips, Maggi, sugary drinks, or random canteen food to get through the day.

Your challenge is to create a physical packaged product that gives students a better option.

It could be a snack, bar, bite, drink mix, sachet, or any other student-friendly product format but it must be easy to carry, easy to consume, affordable, repeatable, and built for real student life.

Your product should not feel like a boring “healthy snack.”

It should feel like something students would actually want to buy, carry, consume, reorder, and recommend.

Your goal is simple:

**Build India's next student energy product something that solves a real daily need and can become a repeat-purchase D2C brand.**

You will build:

1. A clear student insight
2. A target audience and use case
3. A physical product concept
4. Product format, flavour direction, and key benefits
5. Brand name and positioning
6. Packaging direction and visual identity
7. 3 to 5 SKU variants
8. Pricing and basic unit economics
9. D2C website or landing page concept
10. Distribution strategy across D2C, quick commerce, Amazon, college kiosks, or campus ambassadors
11. Launch campaign for the first 30 days
12. First 1,000 customers strategy

13. Retention and reorder strategy
14. A deck explaining your complete product, brand, and business strategy

For additional brownie points, you may also create:

1. Packaging mockups
2. Product renders or AI-generated product visuals
3. A sample Shopify landing page
4. A quick commerce listing mockup
5. A 30-second launch reel concept
6. Campus ambassador plan
7. Sampling strategy for colleges
8. Basic revenue projection

## CAMPAIGN ELIGIBILITY

---

To be eligible for submission, your D2C product idea must meet the following conditions:

1. It must be a physical packaged product.
2. It must be designed specifically for Indian students.
3. It must solve a clear student need related to energy, focus, convenience, hunger, routine, or lifestyle.
4. It must be affordable and practical for student consumption.
5. It must have repeat-purchase potential.
6. It must include 3 to 5 SKU variants.
7. It must include pricing and basic unit economics.
8. It must include packaging and brand identity direction.
9. It must include a clear D2C and distribution strategy.
10. It must not make false health, medical, or performance claims.
11. It must not rely on unsafe ingredients, restricted substances, or excessive caffeine.
12. It must feel commercially realistic, not just creatively interesting.

## The Question You Are Trying to Answer

**Can I build a physical D2C product that students would carry, consume, reorder, and recommend not because it looks cool, but because it solves a real daily energy problem?**

## FINAL SUBMISSION

---

Submit the following:

1. **Presentation/deck** explaining your product concept, student insight, brand strategy, pricing, unit economics, and launch plan
2. **Product concept** with format, flavours, benefits, and use cases
3. **Brand identity direction** including name, positioning, packaging, colours, and visual style
4. **3 to 5 SKU variants** with descriptions and pricing
5. **Basic unit economics** for at least 2 hero SKUs

6. **D2C and distribution strategy** across website, quick commerce, Amazon, college kiosks, or campus ambassadors
7. **First 1,000 customers strategy**
8. **Retention and reorder strategy**
9. **Bonus:** Packaging mockups, product renders, landing page, quick commerce listing, launch reel, sampling plan, or revenue projection
10. Date of Submission: **23rd June 2026**
